

# **Application Deployment With Kubernetes**

# Hello

- Stan Domula
- SRE @LOVOO since Sep. 2017

# Goals

- Deploy service
- Upgrades & downgrades
- Staged dev & prod deployments

# Tools

- go

- docker

- kubectl

- helm

# Kubernetes

- Production-Grade Container Orchestration
- Automated container deployment, scaling, and management

<https://kubernetes.io/>

# The Server

- Written in go
- Simple REST server
- Returns “Hello World”

# Demo

## Code

# Container

- Package binary
- Dockerfile
- docker build & push

# Demo

## Container

# Kubernetes Objects

# Kubernetes Objects

**Pod**

# Kubernetes Objects

Pod

# Kubernetes Objects

# Demo

## Deployment

# Kubernetes Objects

# Kubernetes Objects

Pod

# Kubernetes Objects

# Demo

## Service

# Recap

- **Pod**
  - one or more containers that share storage and memory
- **Deployment**
  - Describe desired state
  - Deployment controller changes current state
- **Service**
  - route traffic to specific pod(s)

# Deployment Stages

- Develop
- Canary
- Production

# Deployment Stages

# Deployment Stages

# One More Resource

- **Namespace**
  - Virtual clusters backed by the same physical cluster

# Helm

- “The package manager for Kubernetes”
- Define, install, and upgrade applications
- Templating Kubernetes manifests

<https://helm.sh>

# Demo

## Helm

# Thank you!

We are hiring!!
